Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/643,018	Applicant(s) KLAERS ET AL.	
	Examiner Gregory R. Del Cotto	Art Unit 1751	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-24 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-5 and 7-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Addison et al (US 5,801,137).

Addison et al teach a detergent composition designed for use in automatic dishwasher machines. See column 1, lines 10-30. The compositions comprise a

Art Unit: 1751

detergent builder system, an organo diphosphonic acid, an organic polymer containing acrylic acid or its salts. See column 3, lines 60-69. Additionally, antiredeposition agents may be used in the compositions including polyethylene glycols having a molecular weight of between 1000 to 10,000. See column 5, lines 55-69. Additionally, a highly preferred component is a surfactant system comprising anionic, cationic, nonionic, ampholytic, and zwitterionic surfactants in amounts 0.5% to 40% by weight. Suitable anionic surfactants include sulfate surfactants, anionic sulfonate, magnesium salt of an anionic carboxylate surfactant etc. See column 8, lines 1-60. Note that, the Examiner maintains that the magnesium salt of the anionic carboxylate surfactant would be encompassed by the alkaline earth metal salt as recited by instant claims 10-13. Suitable nonionic surfactants include polyhydroxy fatty acid amide surfactants, nonionic condensates of alkyl phenols, alkylpolysaccharide surfactants, fatty acid amide surfactants, etc. See column 10, line 40 to column 11, line 45. Sequestrants may also be used in amounts from 0.05% to 20% by weight and suitable sequestrants include organo aminophosphonates, EDDS, etc. See column 15, lines 25-60. Additionally, the compositions may comprise a suds suppressing system in amounts from 0.01% to 15% and include silicone antifoam compounds, etc. See column 17, line 40 to column 18, line 69. Additionally, the compositions may contain a builder system which may include a water soluble carboxylate. Additional builders include alkali metal bicarbonates, borates, phosphates, etc. See column 6, lines 1-20. Note that, the Examiner asserts that these salts are encompassed by the broad terminology "alkali metal salt" as recited by the instant claims. Addison et al do not teach, with sufficient

Art Unit: 1751

specificity, a solid detergent composition containing an anionic surfactant, an alkali metal salt, alkyl polyglycoside, a nonionic surfactant, a hardening agent, and the other requisite components of the compositions in the specific proportions as recited by the instant claims.

Addison et al do not teach, with sufficient specificity, a solid detergent composition containing an anionic surfactant, an alkali metal salt, alkyl polyglycoside, a nonionic surfactant, a hardening agent, and the other requisite components of the compositions in the specific proportions as recited by the instant claims.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to formulate a solid detergent composition containing an anionic surfactant, an alkali metal salt, alkyl polyglycoside, a nonionic surfactant, a hardening agent, and the other requisite components of the compositions in the specific proportions as recited by the instant claims, with a reasonable expectation of success and similar properties with respect to other disclosed components, because the broad teaching Addison et al suggest a solid detergent composition containing an anionic surfactant, an alkali metal salt, alkyl polyglycoside, a nonionic surfactant, a hardening agent, and the other requisite components of the compositions in the specific proportions as recited by the instant claims.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Addison et al (US 5,801,137) as applied to claims 1-5, 7, and 14-24 above, and further in view of Rolando et al (US 5,876,514).

Addison et al are relied upon as set forth above. However, Addison et al do not teach use of an acetate salt as recited by instant claim 6.

Rolando teach an alkaline warewashing detergent composition that can contain a critical amount of a nonionic rinse agent that when used in automatic warewashing machines permits the use of a potable water rinse without the addition of a separate rinse agent. The detergent can be in the form of a particulate, pelletized or a block solid. See Abstract. The composition may contain a solidifying agent when used as a solid block. The solidifying agent may provide for controlled dispensing by using solidification agents which have a relative aqueous solubility. Suitable agents which may be hardening/solidifying agents include urea, calcium carbonate, sodium acetate, etc. These solidifying agents are used in amounts which promote solubility and the requisite structural integrity for the given application. See column 9, line 30 to column 10, line 40.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to use an acetate salt in the cleaning composition taught by Addison et al, with a reasonable expectation of success, because Rolando et al teach the use of hardening agents such as sodium acetate in a similar solid detergent composition which provide controlled dispensing and structural integrity and, further, Addison et al teach the formation of solid detergent compositions in general.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11

Art Unit: 1751

F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-24 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,387,870. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-22 of US 6,387,870 encompass the material limitations of the instant claims.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to formulate a solid detergent composition containing an anionic surfactant, an alkali metal salt, alkyl polyglycoside, a nonionic surfactant, a hardening agent, and the other requisite components of the compositions in the specific proportions as recited by the instant claims, with a reasonable expectation of success and similar properties with respect to other disclosed components, because claims 1-22 of US 6,387,870 suggest a solid detergent composition containing an anionic surfactant, an alkali metal salt, alkyl polyglycoside, a nonionic surfactant, a hardening agent, and the other requisite components of the compositions in the specific proportions as recited by the instant claims.

Conclusion

Art Unit: 1751

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Remaining references cited but not relied upon are considered to be cumulative to or less pertinent than those relied upon or discussed above.

Applicant is reminded that any evidence to be presented in accordance with 37 CFR 1.131 or 1.132 should be submitted before final rejection in order to be considered timely.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory R. Del Cotto whose telephone number is (571) 272-1312. The examiner can normally be reached on Mon. thru Fri. from 8:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on (571) 272-1316. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
